

The Management of Bertola s.r.l. recognizes the need to establish and maintain an Environmental Management System applicable to all activities carried out, and more specifically to galvanic treatments of copper, nickel and chrome plating for third parties

With the introduction of the Management System previously mentioned, the Management is committed to developing and pursuing the following objectives:

- Prevent, reduce or eliminate, where possible, the production of environmental pollution;
- Manufacture production in such a way as to minimize negative environmental effects during the activity;
- Reduce, where possible, the consumption of resources (raw materials and energy);
- Continuously pursue the prevention of negative environmental impacts through careful monitoring of the environmental aspects that may originate;
- Minimizing the consequences of any negative environmental impacts through controlled and responsible management of all activities;
- Constantly comply with the requirements established by applicable laws and regulations;
- Pursue the continuous improvement of environmental performance.

The following general principles apply to the achievement of goals and objectives:

- Environmental management involves all functions and business activities at every level;
- Environmental objectives and targets are made publicly available through the distribution of this environmental policy, the Environmental Management Manual and its management within the company;
- The objectives and targets are progressively implemented through environmental management programs, periodically updated and reviewed by the Management through the review of the environmental management system;
- The Management gives the environmental management the same priority as the economic and social management and quality management, while still achieving what is technically and economically feasible;
- New products, processes and raw materials are selected and developed to provide environmentally friendly and manageable services and products with as little impact as possible;
- Environmental policy is widespread to the public and stakeholders through press, internet, environmental communications or the transmission of information brochures.

The management decides that environmental performance is not disclosed to the outside, subject to the cases provided for by current legislation (see, for example, IPPC practice).

President and CEO

LIVIO BERTOLA
